

Ventilation Management: Beyond the Basics

Program Description

Ever wonder what is next beyond ventilator basics? This class will refresh your knowledge of basic ventilator management, then move on to more advanced concepts. You will learn about: Noninvasive positive pressure ventilation modes with common clinical indications for using these modes; Indications and benefits of invasive modes of ventilation, including pressure control, volume control, and spontaneous ventilation modes. ABG interpretation as well as waveform capnography will be examined and demystified. The class concludes with hands-on time with lungs to see the changes of PEEP, aggressive bagging, and other ventilatory maneuvers.

Outline

Anatomy, Physiology & Nursing Assessment of the Pulmonary System
Noninvasive Ventilation Modes (BiPAP & CPAP)
Clinical Scenarios of Invasive Ventilation Modes
ABG Interpretation, Waveform Capnography
Clinical Scenarios, Case Studies and Hands-on Instruction

Who Should Attend?

Registered nurses, licensed practical nurses, students and other health sciences professionals desiring to understand the mechanics of ventilation management.

Contact Hours: 4.0

Pharmacotherapeutic hours: 0.0

Skill Type: Acute Care Skills
